Application

DIRONIL 10 is a highly alkaline, concentrated power cleaner for removing street dirt and fatty deposits from painted surfaces and plastics. DIRONIL 10 is used for basic cleaning and chassis cleaning on commercial and construction vehicles. DIRONIL 10 has also proven useful in the areas of industrial cleaning and hall cleaning.

Range of application

For cleaning commercial and construction vehicles, hall and workshop floors, tanks and containers. For the removal of fat and protein deposits.

Directions for use

Spray DIRONIL 10 from top to bottom. Depending on the severity of the dirt, apply pure or concentrated up to 1:10 for basic cleaning; for regular cleaning apply concentrated from 1:20 up to 1:100. Introduce the dirt to the solution using a washing brush. When finished rinse off with water - if necessary use a high pressure device.

Ingredients

Alkalis, anionic and non-ionic surfactants, complexing and dispersing agents, additives.

Important information

Do not use on non-alkali-resistant materials - e.g. aluminium. Test material compatibility before the first use. Protect from direct sunlight and do not allow the cleaning solution to dry on.

Environmental Safety

This product complies with the relevant legal requirements. The surfactants contained in this product are biodegradable and comply with the requirements of the EU Detergent Regulation (EC) 648/2004.

The polyethylene containers are cleaned and recycled.

Further products

For alkaline vehicle cleaning use our product BRILLANT GLANZREINIGER. PLANEROL has proven its worth for cleaning covered vehicles.
