Marathon® Series Corrosion-Resistant Mounted Products and Bearing Units

Few industries challenge bearings with a harsher operating environment than the food and beverage industries. Perhaps no industry works as hard to meet regulations governing contamination. When MRC® introduced the Marathon® Series Composite Mounted Bearing Units, it was possibly the best solution to the problems associated with bearing failures.

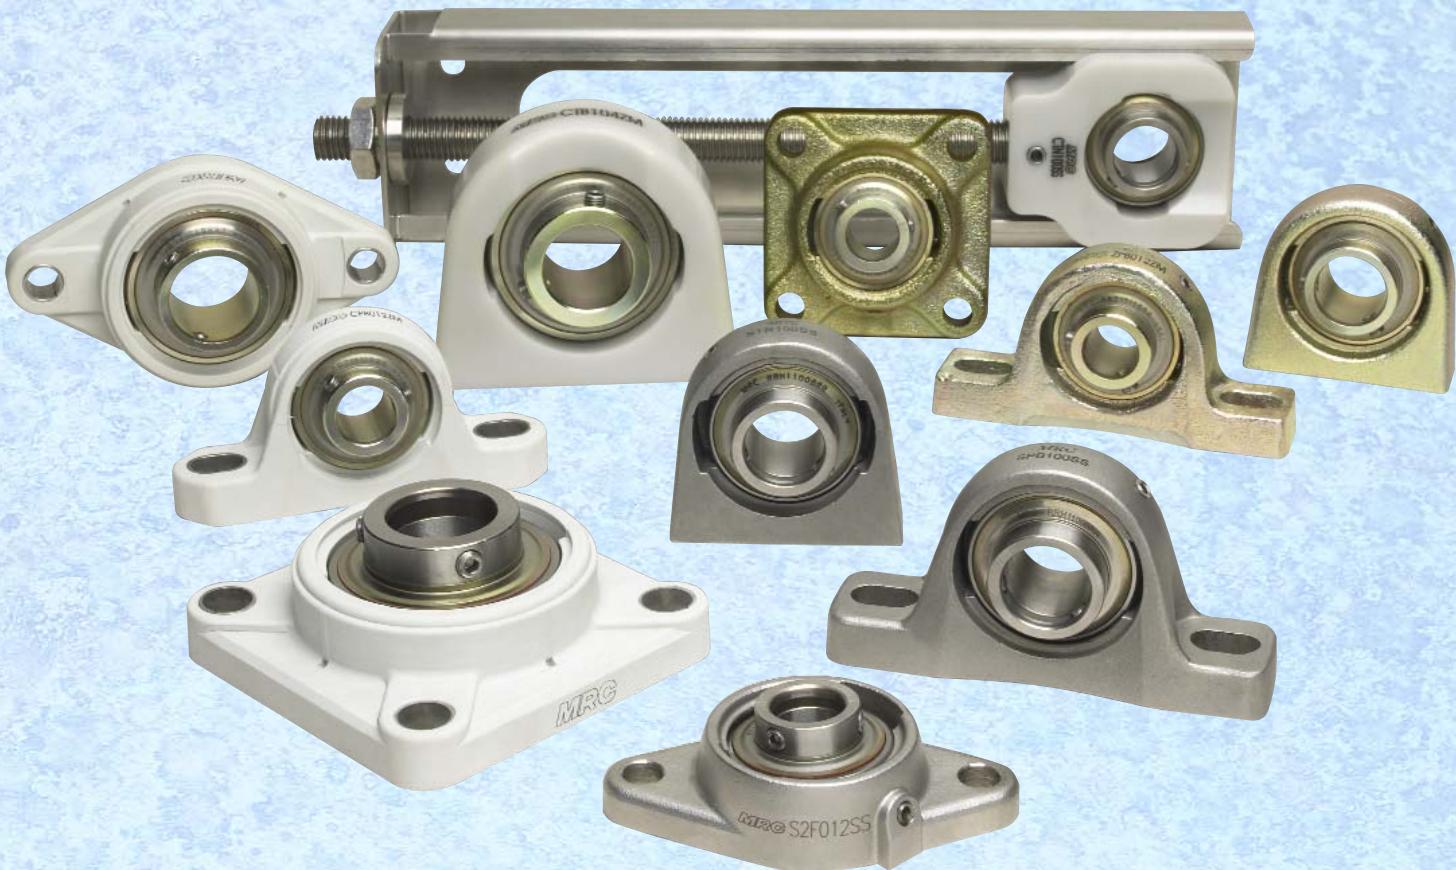

Now the composite units are joined by our **HD_i**—heavy-duty cast iron—and **XD_s**—extreme-duty cast stainless steel—to more thoroughly meet the needs of the industry.

The HD_i Series was developed to provide corrosion resistance together with the strength of cast iron but eliminate the problem of flaking nickel plating. These units consist of a ZMaRC® coated cast iron housing in combination with a ZMaRC coated insert bearing and are priced competitively with other nickel-plated versions. (See page 3 for more details.)

For extremely challenging applications, MRC offers the XD_s Series, with top-of-the-line corrosion resistance and the greatest housing strength available within the Marathon line. These housings utilize an AISI 300 series cast stainless steel housing together with MRC's proven stainless steel insert bearing. (See page 4 for more details.)

The entire maintenance-free Marathon Series is built to resist corrosion and is designed for extended service life.

At the heart of the units are high-quality, corrosion-resistant insert bearings, available with MRC's ZMaRC coating or with stainless steel construction. The units' multifunction low-friction, rubber seals are bonded to AISI 304 stainless steel for superior corrosion resistance, and sealed-for-life lubricants are USDA approved.

A Composite Housing with Integrated Performance Features

The Marathon Series' composite housing resists citric acids, cooking fats and most chemicals used in food and beverage processing. It is constructed of a thermoplastic composite material that can be up to 61% lighter than cast iron housings. Its spherical bore accommodates the insert bearing's spherical outer surface, enabling the unit to fully compensate for initial bearing seating misalignment.

Plus, the housing is loaded with design and performance advantages:

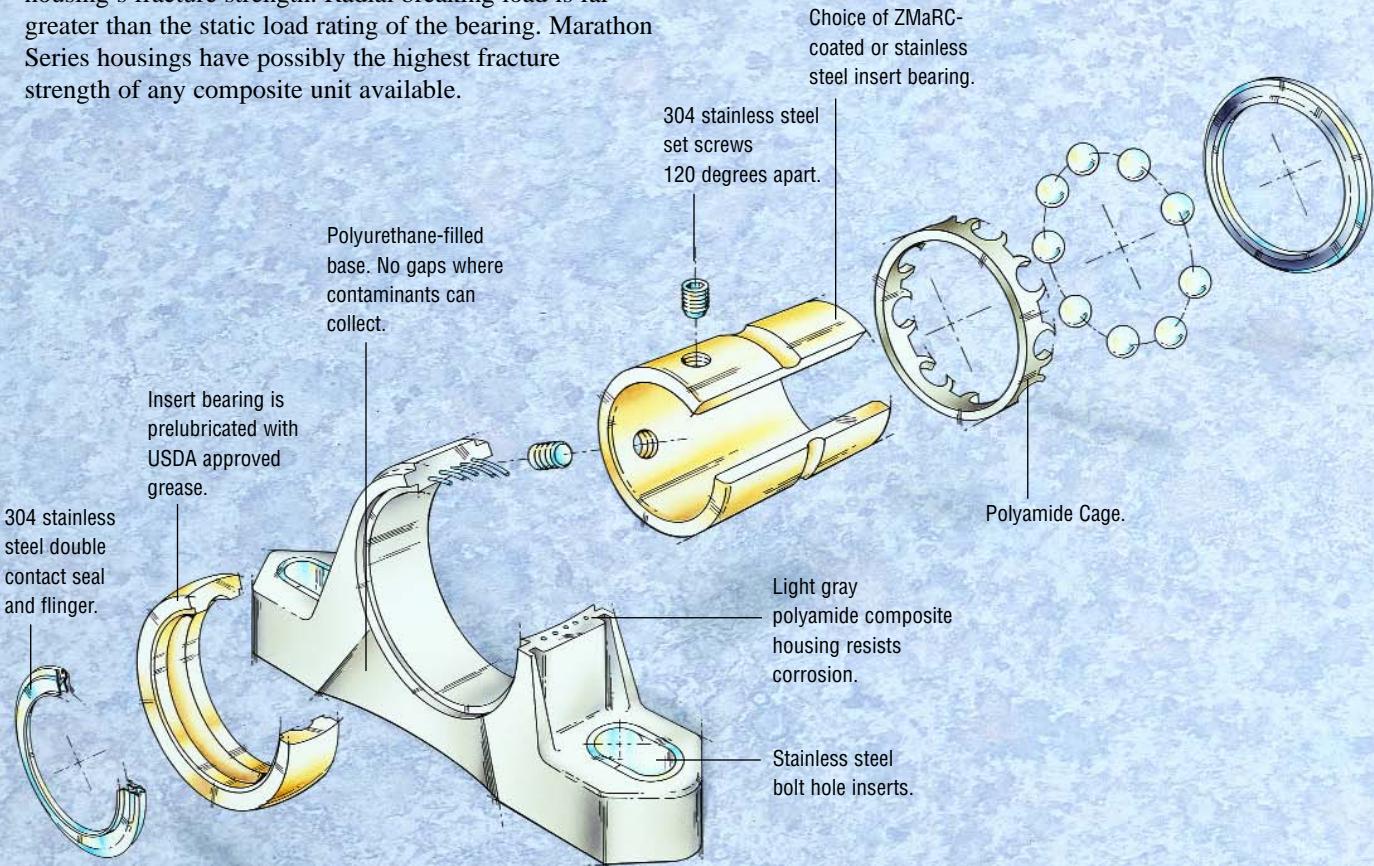

- Steel coils embedded in the housing contribute to the housing's fracture strength. Radial breaking load is far greater than the static load rating of the bearing. Marathon Series housings have possibly the highest fracture strength of any composite unit available.

- A polyurethane-filled housing base enables the unit to meet flush with its mounting surface. Flush surface-to-surface mounting eliminates gaps—potential areas for contaminants to collect.

- 300 Series stainless steel bolt hole inserts provide added strength to each housing foot and prevent corrosion.

- Marathon Series units are available in the following housing designs to meet the needs of most food and beverage processing applications:

- pillow blocks
- two- or four-bolt flange
- tapped base
- three-bolt bracket flange
- narrow and wide slot take-up
- low backing height pillow block
- low profile two- and three-bolt flange
- four-bolt piloted flange
- hanger

NEW! ZMaRC® Coated Cast Iron Units with ZMaRC coated Insert Bearings

MRC's newest solution to the unique needs of the food processing industry is **Marathon HD_i**—a *new* corrosion-resistant, heavy-duty cast iron series of bearing units.

The cast iron housings, protected with MRC's proven ZMaRC coating, eliminate the flaking problems associated with nickel-plated products. The housings are matched with our ZMaRC-plated, lubed-for-life, quality insert bearings.

The HD_i series provides a number of cost-saving and performance benefits. As with all Marathon products, MRC's patented two-part stainless steel seals allow the units to operate in heavy washdown environments without regreasing. And since there is no need for relubrication, continuous grease purge is never a problem.

Advantages of the HD_i Series:

- Complete ZMaRC coating on all housing surfaces for long-term corrosion resistance.
- ZMaRC coating will not flake off.
- Housings and bearings are resistant to the majority of common washdown solutions.
- HD_i units require no relubrication, even in a washdown environment—saving time and money—while providing a cleaner-running unit.
- Open spaces on bases and backs of ZMaRC-coated housings are filled with polyurethane, eliminating areas

where moisture and product can collect, resulting in a more sanitary housing design.

- All HD_i units are factory lubed-for-life with USDA approved H1 grease.
- Two-part sealing for maximum protection

Like all Marathon bearing units, Marathon HD_i units contain an AISI 304 stainless steel inner seal and outer seal. These components work in tandem to form an extremely effective sealing system. (See page 5 for more details.)

The added strength and durability of the Marathon HD_i housings make them particularly well suited for applications in red meat, pork and poultry processing facilities where both housing strength and corrosion resistance are a concern.

The HD_i Series is available in the following housing designs:

- pillow blocks
- two- or four-bolt flange
- tapped base

Extreme Duty Cast Stainless Steel Mounted Units

Composite housing units are suitable for many food and beverage industry applications. However, there are extremely challenging applications that require an even more durable unit—the XD_S line of Marathon units. These housings are AISI 300 series cast stainless steel with MRC's proven stainless steel insert bearings.

The cast stainless housings are the strongest housings offered in the Marathon family. For any application where loads are very heavy or where shock loads are possible, the extra strength and toughness of the stainless steel housings are a benefit. Also, in applications where failure of the housing could result in injury, such as in cases where workers pass below a portion of a machine, the safety factor inherent in the cast steel housing is desirable.

Exposure to extremely aggressive washdown chemicals is another reason to choose these stainless units. While composite and plated housings are resistant to most of the chemicals in use today, they can be susceptible to some strong concentrations of chlorine, hydrogen peroxide and other chemicals. The cast stainless housings, made of an AISI 300 series stainless material, are not affected by those same chemicals.

The XD_S cast stainless housings were designed from the ground up for use in food and beverage applications. The bases are cast flat with no recesses to trap debris and bacteria, and the exposed surfaces of the housings have no unnecessary crevices or pockets. Consideration was given to surface roughness as well. The XD_S units' smooth cast surfaces minimize the material trapped on the surface allowing a more thorough cleaning.

Like the other members of the Marathon family, the XD_S series incorporates the proven insert bearing design and patented sealing arrangement (see page 5), and are also greased for life and maintenance free.

Marathon XD_S is MRC's top of the line unit. Whether

the application involves heavy loads, aggressive chemicals or intolerance to bacteria buildup, the XD_S units are up to the challenge.

Housing styles available include:

- pillow block
- two- and four-bolt flange
- tapped base

MRC XD_S Extreme Duty Machined Stainless Steel Mounted Units

MRC can also offer additional housing styles in machined stainless steel. These units also utilize AISI 300 series stainless steel but, rather than using a cast housing, these units are machined from solid stainless plate. Due to this manufacturing difference, these housings offer even better surface roughness since all surfaces are machined.

These are especially suited for applications where surface roughness is critical, such as instances where chronic bacterial problems have existed. As with the cast housings, there are no unnecessary recesses or cavities to trap debris.

Just like the cast stainless units, MRC's excellent stainless steel insert bearings are used.

In addition to the styles listed above, are available in housing styles:

- three-bolt bracket flange
- wide and narrow slot take-up units
- compact two- and three-bolt flange
- piloted flange units

All machined housings are available through the MRC MTO (Made To Order) program.

Choose from ZMaRC-coated...

The Marathon Series is designed to withstand food processing environments. The unit's high quality insert bearing is available with MRC's proprietary ZMaRC coating on the inner and outer rings. ZMaRC resists frequent wash downs with water and with acidic and caustic solutions far better than conventional insert bearings and conventional coatings, such as black oxide. In food and beverage applications, that means greater protection against rust, greater protection against contaminant-related bearing failure and greater assurance that your equipment will pass USDA inspections.

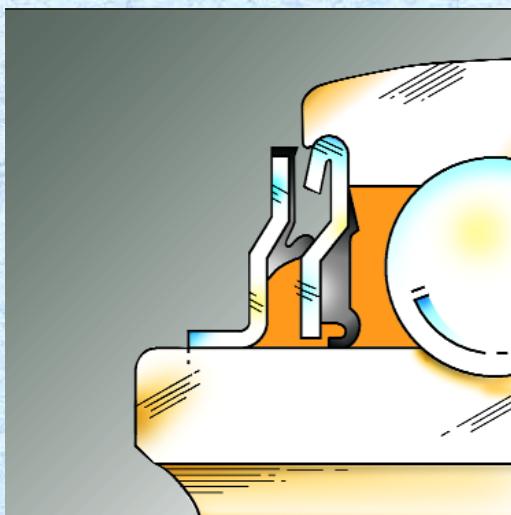

...or Stainless Steel Insert Bearings

If you prefer stainless steel, MRC will supply the Marathon Series with AISI 420 C stainless inner and outer rings and balls.

Both ZMaRC-coated and stainless steel insert bearings come in bore sizes ranging from $\frac{3}{4}$ " to $1\frac{1}{2}$ ", and 20 mm to 40 mm. ZMaRC is also available in $1\frac{15}{16}$ ". The insert bearing's stainless steel set screws, positioned 120 degrees apart, minimize inner ring distortion while maintaining good gripping strength.

A Stainless Steel Sealing Arrangement Double-guards Against Contaminants

A double-protection seal keeps Marathon Series Mounted Bearing Units running contaminant free. The sealing arrangement consists of a double-lip, AISI 304 stainless steel insert seal, an AISI 304 stainless steel flinger and a rubber-backed seal gasket. The flinger and seal's low-friction rubber lips, with optimized axial contact, form a double barrier against pollutants and wash downs. The seal gasket prevents contaminants from migrating around the seal insert's O.D. The flinger adds mechanical and centrifugal protection against contaminant entry. The space between the insert seal and flinger is filled with USDA Food Grade grease for even greater sealing efficiency.

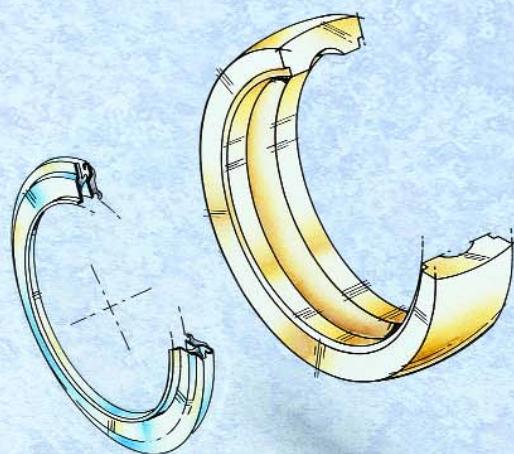

USDA-approved Grease

Marathon Series Composite Mounted Bearing Units are prelubricated-for-life with USDA H1-approved grease. The high quality synthetic grease is odorless and tasteless, leaving foodstuffs unaffected by lubricant contact. It is approved for use in all food processing industries, including meat, fish, poultry and fruit processing equipment. And it resists washout, even during frequent washdowns with hot and cold water, and with disinfectant solutions.

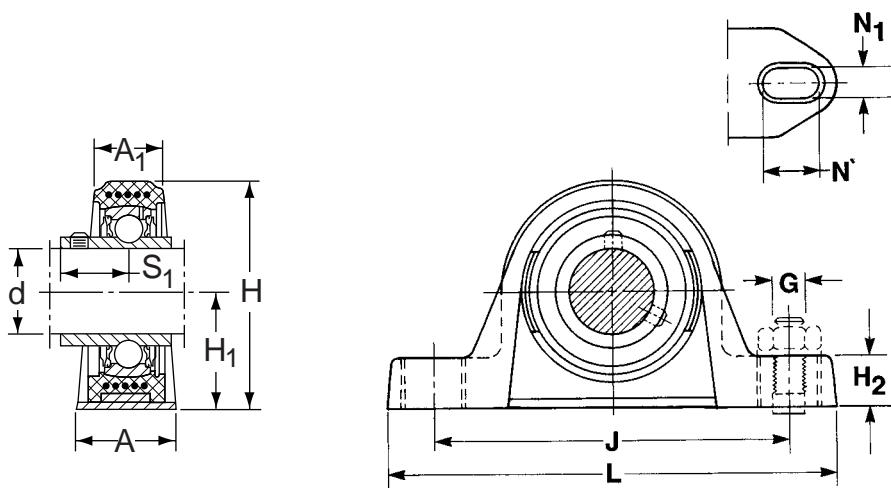

Other Marathon Mounted Bearing Unit grease benefits:

- Excellent internal and external bearing corrosion protection.
- High aging resistance for extended lubricant life.
- High load carrying capacity, which helps prevent premature bearing wear.

MRC Marathon Series Composite Mounted Bearing Units are greased and sealed for life. MRC does not recommend regreasing. If required, units with relubrication fittings are available for your application. Adding a "G" suffix to the part number denotes a regreasable unit.

Cast polymer housing. No steel coils.

² Check with MRC for availability

Stainless Steel Take-up Frames

MRC take-up frames are constructed of 304 stainless steel and can be equipped with Marathon Series Composite Mounted Bearing Units. They are designed for conveyor systems used in meat, poultry, fruit, vegetable, beverage and other food industry operations.

Normally employed at the idler end of conveyor systems, take-up frames support conveyor shafts and act to produce the correct conveyor belt tension. Unlike many take-up frames fabricated on site from non-stainless materials, MRC stainless take-up frames feature sturdy single-piece construction and resist corrosion from frequent washdowns and harsh food industry chemicals.

MRC take-up frames mount securely to conveyor systems via four mounting bolts. The frames and take-up bearing units may be adapted to fit most existing conveyor configurations.

Narrow Slot Take-up Frame

Narrow Slot Stainless Steel Take-up Frames (all dimensions are in inches)

Part number		Frame size		Bolt pattern for 3/8" bolts			Shaft C/L distance	Frame accepts these shaft sizes:
	Travel	A	B	C	D	E	F	Bearing bore

TFN400SS 12	12		19			17½		
TFN400SS 18	18		25			23½		

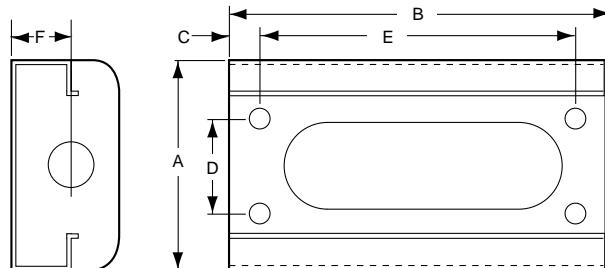

HACCP-Program Compatible

MRC stainless take-up frames help support the stringent sanitation requirements of Hazard Analysis Critical Control Point (HACCP) programs. In addition to being corrosion-resistant, the frames have no narrow gaps or crevices that can trap food contaminants. Also, openings in the side and bottom of MRC frames facilitate quick draining during washdowns.

Marathon Series Bearing Units

Marathon Series bearing units are available separately and may be mounted in MRC take-up frames. These units feature a lightweight thermoplastic housing that resists corrosion from water, citric acid, cleaning agents and most other food industry chemicals. The unit's double-protection sealing arrangement, consisting of an AISI 304 stainless steel insert seal and an AISI 304 stainless steel flinger, protects against both wet and dry contaminants. The units are lubricated for life with a USDA food-grade grease.

Marathon units are available with either a corrosion-resistant ZMaRC- coated insert bearing or a stainless steel bearing.

Marathon Hi-Temp and Submersible Units

MRC Hi-Temp and Submersible Units are fitted with high performance plane bearing inserts specifically designed for these demanding applications. The inserts can be assembled into any of the Marathon housing styles which MRC currently offers. Rotation of the insert in the housing is prevented by means of an anti-rotation slot in the outer ring mating with the set screw inserted into the housing, while still allowing self-aligning capability.

These units provide superior performance in applications which would normally cause premature failure of standard anti-friction bearings requiring lubrication. As with all Marathon products, these units provide improved service life, and do not require lubrication since the polymer is the friction reducing component. Therefore, they are maintenance free and there is no excessive grease purging, which is usually an issue when trying to extend the service life of a bearing in severe operating environments.

Marathon High Temp and Submersible Plane Bearing Units are suitable for a wide range of applications in addition to high temp and submersible conditions. They meet USDA approval for direct contact in meat, poultry and dairy applications, and are suitable for a wide range of food applications where washdown and corrosion are problems.

Marathon Plane Bearing Units

Marathon plane bearing inserts meet many food and non-food application requirements. They are suitable for a wide range of food applications where corrosion is a problem; they can be selected to operate in temperature ranges from cryogenic to 600°F and can be mounted horizontally or vertically; they can also be supplied to handle different loading and speed conditions. And as with all Marathon inserts, lubrication is not required, resulting in simplified maintenance-free operation.

Non-stock plane bearing units can be supplied through the MRC Made-To-Order (MTO) program. The normal lead time for a non-stocked variant is approximately six weeks.

Submersible part number examples:
1" Composite pillow block – CPB100SB
1½" Composite 2-bolt flange – C2F107SB
1½" Composite tapped base – CTB108SB

High temperture part number examples:
1" ZMaRC cast iron pillow block – ZPB100HT
1½" ZZMaRC cast iron 2-bolt flange – Z2F107HT
1½" ZMaRC cast iron 4-bolt flange – Z4F108HT

Submersible part number examples:
1" Stainless pillow block – SPB100SB
1½" Stainless 2-bolt flange – S2F107SB
High temperture part number examples:
1" Stainless pillow block – SPB100HT
1½" Stainless 2-bolt flange – S2F107HT

High Temperature Insert Plane Bearings (HT)

Set Screw Locking

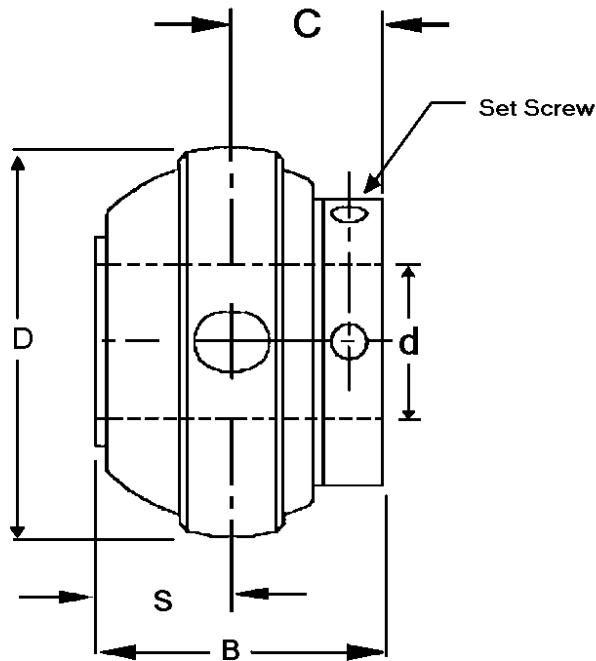

MRC High Temperature Plane Bearing Inserts can withstand consistent temperatures up to 500°F. When normal anti-friction bearings cannot handle the heat, MRC High Temperature Plane Bearings are the best choice to keep rotating equipment running smoothly. The 316 stainless steel inner ring and 304 stainless steel

outer ring offer wear resistance as well as corrosion resistance. The high performance polymer sleeve material allows the bearing to operate at higher speeds compared to typical plane bearings. Since the polymer material is the friction reducing component, no grease is required for proper performance. In the event of premature wear, the insert bearing will not catastrophically fail but will exhibit looseness, indicating that the bearing needs to be replaced. The recommended Marathon housing material for this insert is either the ZMaRC®-coated cast iron or cast stainless steel to meet most application requirements for high temperature duty. In addition, the insert bearing is approved for incidental food contact by the USDA/FDA.

For inch shafts $\frac{3}{4}$ to $1\frac{15}{16}$.

Metric inserts can be supplied through the MTO Program.

*Plane bearing capacity is based on the heat generation which is directly related to speed versus applied load. The "radial load x speed" column above provides the relationship between load versus speed in order to evaluate the bearing suitability. If the application conditions exceed any of the three factors above, different polymer materials can be selected to meet the application needs.

Example for an RRS1100BBL insert bearing.

If the applied load on the bearing is 200 lbs, then based on a "Radial (Fr) x Speed (n)" factor of 190,000, the bearing can rotate up to 950 rpm.

Fr x n = 190,000

Fr = 200 lbs

Therefore: $190,000 / 200 = 950$ rpm

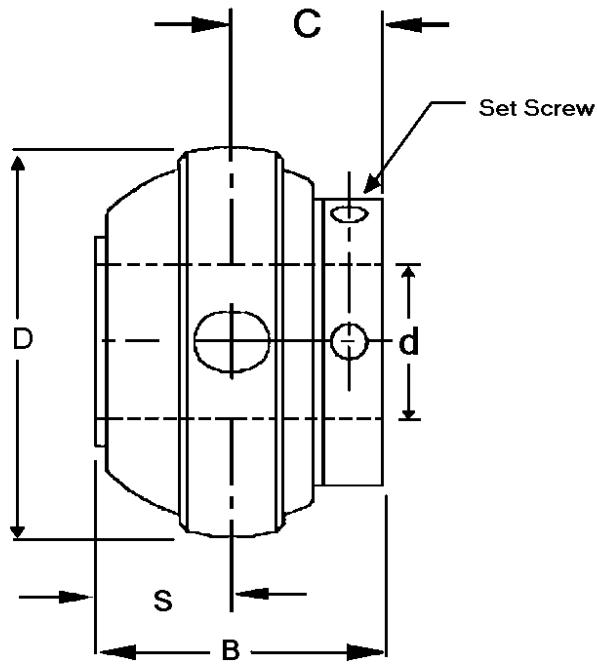

Submersible Insert Plane Bearings (SB)

Set Screw Locking

MRC Submersible Plane Bearing Inserts are suitable for applications which are constantly exposed to or submerged in moisture. When normal anti-friction bearings fail because of grease washout or corrosion, MRC Submersible Plane Bearings are the best choice to keep rotating

equipment running smoothly. The 316 stainless steel inner sleeve offers wear resistance as well as corrosion resistance. The high performance polymer outer ring allows the bearing to operate at moderate speeds without the need for lubrication since the polymer material is self lubricated. The polymer material can withstand continuous temperatures up to 150°F, and tolerates higher temperatures during wash-down. The insert bearing will not catastrophically fail; it wears by becoming loose in the bore. The recommended Marathon housing material for this insert is either composite or cast stainless steel. In addition, the insert bearing is approved for direct food contact by the USDA / FDA.

For inch shafts $\frac{3}{8}$ to $1\frac{1}{16}$.

Metric inserts can be supplied through the MTO Program.

*Plane bearing capacity is based on the heat generation which is directly related to speed versus applied load. The "radial load x speed" column above provides the relationship between load versus speed in order to evaluate the bearing suitability. If the application conditions exceed any of the three factors above, different polymer materials can be selected to meet the application needs.

Example for an RRP1100BPL insert bearing.

If the applied load on the bearing is 40 lbs, then based on a "Radial Load (Fr) x Speed (n)" factor of 4200, the bearing can rotate up to 105 rpm.

Fr x n = 4200

Fr = 40 lbs

Therefore: $4200 / 40 = 105$ rpm

Made-To-Order Products for the Food Processing Industry

Low Backing Height Pillow Block (CPL-ZM or SS)

Size range: $\frac{3}{4}$ – $1\frac{1}{2}$ inches, 20 mm – 40 mm

Insert bearing: ZMaRC-coated or stainless steel

These units have a lower backing height than standard pillow blocks while the base bolt center distance, bolt size, insert bearing and load ratings remain the same. The overall height and base thickness are slightly smaller. These units are non-regreasable but can be furnished with grease fittings on special order. A regreasable unit is denoted by adding a "G" suffix to the unit part number.

Mounting and center height interchangeable with the following:

AMI	UCLP
Dodge	P2B-SC
Fafnir	YAK
Hub City	PB250
Link Belt	PL3
McGill	CL-25
Sealmaster	NPL

Low Profile 2-Bolt Flange Unit (C2L-ZM or SS)

Size range: $\frac{3}{4}$ – $1\frac{1}{2}$ inches, 20 mm – 35 mm

Insert bearing: ZMaRC-coated or stainless steel

These units are smaller than a standard 2-bolt flange unit but have the same insert bearing and load ratings. They are used where space is limited. The housing bolt holes are round to accept round machine bolts. They are non-regreasable but can be furnished with grease fittings on special order. A regreasable unit is denoted by adding a "G" suffix to the unit part number.

Mounting interchangeable with the following:

Dodge	LFT-SC
Hub City	FB160
McGill	FBS2-25

Hanger Units (SHU-SS)

Size range: $\frac{3}{4}$ – $1\frac{1}{2}$ inches, 20 mm – 40 mm

Insert bearing: Stainless steel

These units are used on screw conveyors and include a stainless steel housing tapped for a straight pipe thread. These units are non-regreasable but grease fittings can be furnished on special order. A regreasable unit is denoted by adding a "G" suffix to the unit part number.

Mounting interchangeable with the following:

AMI	UCECH, UCHPL
Dodge	SCHB
McGill	MCHB
Sealmaster	SCHB

Low Profile 3-Bolt Flange Unit (C3F-ZM or SS)

Size range: $\frac{3}{4}$ – $1\frac{1}{2}$ inches, 20 mm – 35 mm

Insert bearing: ZMaRC-Coated or Stainless Steel

These units are non-regreasable and are applied where space constraints require a compact unit with sufficient strength for the application. The insert bearing and load ratings are the same as a standard unit with the same shaft diameter. The housing bolt holes are round to accept round machine bolts. A grease fitting can be furnished on special order. A regreasable unit is denoted by adding a "G" suffix to the unit part number.

Mounting interchangeable with the following:

AMI	BTM
Dodge	LF-SC
Hub City	FBI150
Sealmaster	LF

4-Bolt Piloted Flange Unit (CPF-ZM or SS)

Size range: $\frac{3}{4}$ – $1\frac{1}{2}$ inches, 20 mm – 40 mm

Insert bearing: ZMaRC-coated or stainless steel

These are non-regreasable units which have an accurately machined piloting diameter to position the unit in the bore of the mounting surface, eliminating the need for any additional adjustments. The insert bearings and load ratings are the same as standard units with the same shaft diameter. A grease fitting can be furnished on special order. A regreasable unit is denoted by adding a "G" suffix to the unit part number.

Mounting interchangeable with the following:

AMI	UCFCS
Dodge	FC-SC
Hub City	FC350
McGill	PFC4-25
Sealmaster	SFC

Other shaft sizes may be available on special order.

Contact MRC at 1-800-MRC-7000 regarding pricing, availability or technical service for all Marathon Series products, or for information on regreasable units.

Marathon Series Nomenclature

Inches:

First Digit: Number of inches
Second and third digits: Number of sixteenths of an inch
Example: 103 indicates $1\frac{3}{16}$ (unit)

Metric:

First two digits:
Number of millimeters
Example: 25 would indicate 25 millimeters

INSERT BEARING

ZM

ZMaRC-coated

SS

Stainless steel

G

Relubricatable bearing unit

ZMR

ZMaRC-coated insert bearing, with a $1\frac{1}{4}$ " bore, fitted into a housing that usually accommodates a $1\frac{3}{16}$ " insert bearing

SSR

Stainless steel insert bearing, with a $1\frac{1}{4}$ " bore, fitted into a housing that usually accommodates a $1\frac{3}{16}$ " insert bearing

HT

High temparture plane bearing

SB

Submersible plane bearing

HTR

High temparture insert bearing with a $1\frac{1}{4}$ " bore, fitted into a housing that usually accomodates a $1\frac{3}{16}$ " insert bearing.

SBR

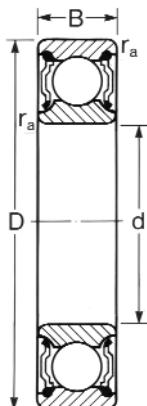

Submersible insert bearing with a $1\frac{1}{4}$ " bore, fitted into a housing that usually accodomates a $1\frac{3}{16}$ " insert bearing

Picker Hub Applications

Stainless Steel Bearings with Solid Lubricant Pack (W64F)

Single row deep groove (SRDG), double sealed, stainless steel ball bearings are available with solid lubricant pack in a food grade formulation identified as W64F. This lubricant is USDA approved for use in food related applications with incidental food contact. It has excellent oil lubricating properties and helps prevent grease washout and contamination under harsh operating conditions. This lubricant pack combined with stainless steel bearing components and synthetic rubber seals, provides a significant increase in bearing life in these applications.

Stainless steel single row, deep groove ball bearings packed with W64F solid lubricant are available from stock in five sizes, as shown in the table below. In addition to the suffix "ST" to denote stainless steel, a descriptive suffix "-W64F" is included to distinguish them from standard stainless steel bearings. Other sizes can be furnished on special order.

For equivalent load and life calculations see page 54 and 55 in the MRC Engineering Handbook.

Technical Data

Maximum Operating Temperatures

The temperature limits, measured on the bearing outside diameter are:

Maximum continuous: 180°F (82°C)

Maximum intermittent: 200°F (93°C)

Load Ratings

Load ratings for bearings lubricated with W64F solid lubricant are the same as for standard bearings.

Speed Limits

The speed limit N_{dm} , is dependent on the bearing bore and outside diameters, and RPM, in the following relationship:

$$N_{dm} = RPM \times \frac{(Bore + O.D.)}{2}$$

(bore, OD in mm)

For double sealed or shielded, single row, deep groove, stainless steel ball bearings, the limiting value of N_{dm} is 240,000.

It is important to note that as ambient or externally produced temperatures increase, the maximum operating speed may have to be reduced, to keep the bearing operating temperature within the maximum operating limit. As with most bearing lubricants, reducing bearing temperature adds to the capability of W64F.

¹⁾ Fillet radius indicates maximum fillet radius on shaft or in housing which bearing corner will clear.

²⁾ Rating for one million revolutions or 500 hours at 33 1/2RPM.

Marathon Series Product Range

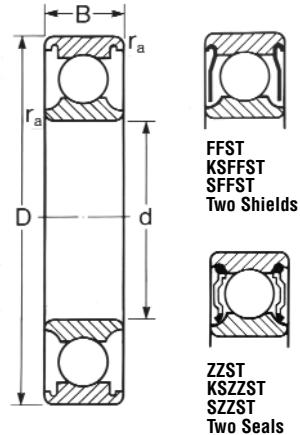

Stainless Steel Single Row Deep Groove (SRDG) Ball Bearings

MRC stainless steel (SRDG) ball bearings are used in fish, poultry and other food processing applications. Examples of popular applications include automatic filleting and sizing equipment aboard fishing trawlers, and evisceration equipment in poultry plants.

MRC stainless steel SRDG ball bearings exhibit significantly longer life than standard bearings in a wide range of demanding applications.

All MRC stainless steel SRDG ball bearings can also be specified with a solid lubricant pack that prevents grease washout during washdowns and helps protect against contamination in harsh environments.

For equivalent load and life calculations see page 54 and 55 in the MRC Engineering Handbook.

¹⁾ Fillet radius indicates maximum fillet radius on shaft or in housing which bearing corner will clear.

²⁾ Listed values are for a pressed stainless steel cage; ABEC.1. The speed ratings have been determined through historical application and practice.

³⁾ Rating for one million revolutions or 500 hours at 33 1/2RPM.

Marathon Series Tolerances and Dimensional Data

Insert Bearing Bore Tolerance and Radial Clearance

BEARING BORE DIAMETER	INCH									MILLIMETER				
	¾	1	1½	1¾	1¼	1⅓	1⅔	1½	1⅚	20	25	30	35	40

RADIAL CLEARANCE	in mm	.0005 – .0011 .013 – .028			.0006 – .0013 .015 – .033				.0007- .0014 .018- .036	.0005 – .0011 .013 – .028		.0006 – .0013 .015 – .033		

Shaft Diameter Tolerances

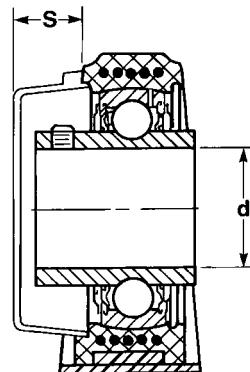

SHAFT DIAMETER in	TOLERANCE in
Up to 1½	+0.0000 / -0.0005
2-4	+0.0000 / -0.0010

For stainless steel insert bearings (RRH series), the above tolerances are especially critical because of the bearing material properties. Undersized shafting, excessive set screw tightening, and severe environmental conditions can result in excessive ring distortion which can effect the performance of the bearing. Therefore, it is highly recommended that the proper set screw torque and shaft diameter tolerance be used (see assembly instructions on pages 38 and 39).

End Cover Stickout (S)

SHAFT DIAMETER d	S	
	in	mm
¾	20	0.709 20.5
	25	0.709 20.5
1	—	0.709 20.5
	30	0.874 22.2
1⅓	35	0.965 24.5
	—	0.965 24.5
1⅔	—	0.965 24.5
	40	1.024 26.0

End cover available on pillow blocks (CPB), 2-bolt flange units (C2F) and 4-bolt flange units (C4F).

End Cover Part number = EC prefix followed by shaft diameter.

Ex.: for a 1-1/8" shaft, EC1-1/8 is the endcover part number.

End covers only available on composite pillow block, 2-bolt and 4-bolt flange housings.

Assembly Instructions for MRC Marathon bearing units

Step 1

Remove any burrs on the shaft with emery cloth or a fine file. Wipe the shaft with a clean piece of cloth. Check the shaft diameter to ensure it meets the tolerances shown below.

Shaft Diameter in	Tolerance in
Up to $1\frac{15}{16}$	+0.0000 / -0.0005
2-4	+0.0000 / -0.0010

Step 2

Back out all the set screws to clear the shaft and slide the unit into position on the shaft.

Step 3

Make sure the housing base and mating surfaces are clean and free of any debris or burrs. Ensure that the supporting surface is flat. If the housing requires shims for adjustment, the shims MUST extend the full length and width of the base. Bolt the housing securely to the support. (See table A for maximum recommended tightening torques for composite housings.) Note: For composite pillow block and flanged housings, a thick, flat stainless steel washer should always be installed between the bolt head and mounting base to properly distribute the clamping force.

Step 4

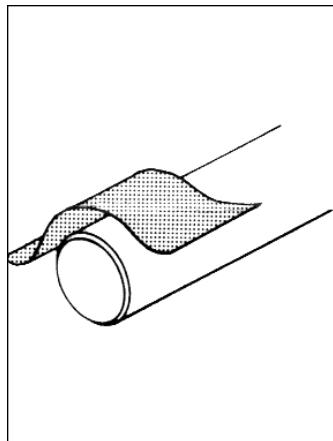

ZMaRC Inserts

Before the set screws are tightened, reinspect the position to make sure the housing did not shift when the base bolts were tightened. Tighten each set screw alternately with the proper hex head socket wrench until they stop turning and the hex head socket wrench starts to spring. Reference Table B for maximum recommended set screw tightening torque values and wrench dimensions. These values should not be exceeded.

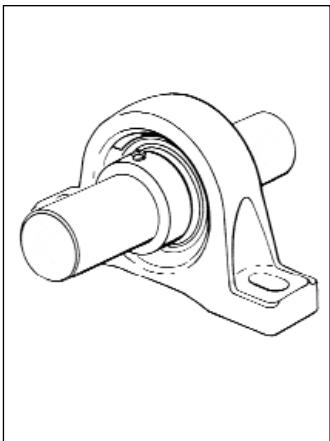

Step 4

Stainless Steel Inserts

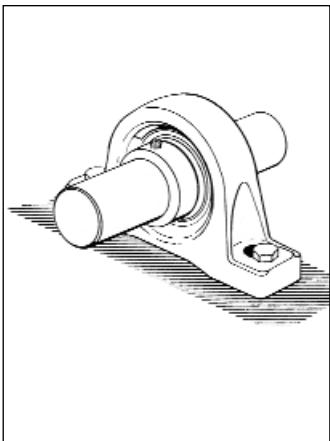

Before the set screws are tightened, reinspect the position to make sure the housing did not shift when the base bolts were tightened. Remove the set screws and apply a bonding agent to the set screw's threads such as LocTite and insert the set screws back into the inner ring. Tighten each set screw alternately with the proper hex head socket wrench until they stop turning and the hex head socket wrench starts to spring. Reference Table B for maximum recommended set screw tightening torque values and wrench dimensions. These values should not be exceeded.

Mounting the Insert Bearing into the Housing

Position the bearing 90 degrees from its normal position and insert it into the slots in the housing, making sure that the set screws do not interfere with the edge of the housing bore. Then swivel the bearing into position using a piece of tubing through the bore. If the housing has a relubrication fitting, the set screw side of the bearing should be matched to the side of the housing with the insert slots. In order to ensure that the relubrication fitting and lubrication holes line up, the initial misalignment should not exceed 5 degrees.
