

TRUCK BEARINGS

PEER...your most reliable off-shore truck bearing source.

Let's be candid. When we say "off-shore" we, and you, expect lower bearing costs. Frankly, that has been our specialty for over 50 years. However, since we are the largest privately owned bearings organization in the USA, quality is part and parcel of our bearing package. You are, indeed, purchasing at lower cost, but these PEER Bearings are highest quality manufactured to QS9000 standards.

Xinchang, China.

Changshan, China.

Peer's world headquarters, Waukegan, Illinois. 300,000 square feet of engineering, quality control, warehousing and administration working for you. Our customers are located throughout the United States, Central and South America and Europe.

One of 30 production lines at one of our Chinese facilities.

Microstructure analysis to assure metallurgical perfection.

Form talysurf testing...a unique concept in form and surface measurement.

The quality control philosophy initiates at Peer's QS9000 manufacturing plants and carries through beyond delivery. Our engineering staff regularly meets with marketing representatives to implement exacting procedures. The result is an on-line quality control awareness which includes state-of-the-art testing equipment and follow-through service liaison with our customers.

PEER tapered roller bearings are designed for long-life truck applications. Tapered bearings are engineered to provide true rolling motion for supporting combined radial and thrust loads in one direction. These bearings are manufactured in a wide variety of conical angles and roller lengths in order to vary the radial thrust rating to suit application requirements. Modern heat treatment techniques allow for greater load applications.

Tapered bearings are manufactured in our QS9000 plant.
