# Design and Construction

*SKF® ball units are a multi-directional, material handling system, manufactured from high quality materials in Birmingham England. They consist of a large load-bearing ball which sits upon many small balls encapsulated in a hemi-spherical cup. The housing can contain a seal to clean the load ball as it rotates. The design greatly reduces friction and allows heavy loads to be moved with a minimum of effort.*

*Our ball units may be used at any orientation but deviation from the vertical may result in a reduction in the stated load ratings quoted in this catalog.*

*SKF continually improves the product range with new innovative and creative ideas using the latest CNC machinery and production/inspection methods.*

*Our specially designed ball unit test machine, regularly used to test production units, together with many years of research and experience, provides world-class performance.*

*There are many possible applications for SKF ball transfer units where loads need to be moved smoothly, precisely and with minimum effort in any direction. Some typical applications include cargo and baggage handling, assembly lines, as a castor, machine loading, sliding-door systems, machine tables, etc.*

*SKF will recommend and supply ball units, and also design and manufacture complete assemblies ready for customers to use.*

# Technical Information

## Fixing Methods

There are various methods of fixing SKF ball units. A wide range of fittings enables them to be used with various different materials.

Fixing clips are available for most designs - See pages 32 & 33.

## Materials

SKF ball units are available in various materials. The material required for your ball units should be quoted when ordering (see table below).

## Lubrication

Each unit is pre-lubricated during manufacture and normally does not require further attention. In certain instances we will advise on lubrication. Greasing or oil points can be incorporated in some units.

## Cleaning

A suitable cleaning or release fluid should be used in dirty conditions. For washing, a suitable detergent such as paraffin; for freeing, a suitable agent such as WD40 - Please consult technical support.

Most designs have dirt exit holes incorporated in the bearing cup, or these can be added on request.

## Shock Loads

When calculating loads, consider the possibility of impact caused by incorrect levels. Spring loaded units will reduce wear and tear if there are regular shock impacts. Shock loading can also be reduced by fitting compressible pads.

Ball units can also be made retractable by other means, such as pneumatic or hydraulic cylinders, cams or levers. They can be programmed to operate in sequence.

## Self Levelling

Can be achieved by fitting rubber pads. This reduces excessive loads on just a few units. Details on request.

## Temperature Range

Min. -22° F to max. +128° F continuous, or +212° F intermittent. Special seals may need to be fitted to suit extreme conditions. In clean conditions and without seals +308° F to +362° F are possible, using Type 15 units at reduced loads.

## Conveying Speed

Maximum recommended conveying speed is 3.28 feet.

## Seals

These help resist ingress of dirt and fine particulate matter. They can be omitted on request.

Type	Load Ball	Support Balls	Housing
13	Carbon Steel 60-66RC	Carbon Steel 60-66RC	Ferrous Steel Bright Zinc Plated
14	Nylon 66	Carbon Chrome 60-66	Ferrous Steel Bright Zinc Plated
15	Stainless Steel AISI 420 52-58RC	Stainless Steel AISI 420 52-58RC	Stainless Steel AISI 304 Self color
16	Stainless Steel AISI 420 52-58RC	Stainless Steel AISI 420 52-58RC	Ferrous Steel Bright Zinc Plated

# Technical Information

## Ball Tables

Square Pitch

Diamond Pitch

Elongated Pitch

Elongated Diagonal Pitch

Vee Location

## Quantity Calculation

The weight of the article to be conveyed should be divided by 3. The result will give the maximum load any single ball will bear.

On any accurately leveled or flexible surface, a number greater than 3 may be used. The surface hardness and condition of the article should be considered to avoid ball unit penetration.

## Spacing

The pitch is calculated by dividing the narrowest dimension by 3.5, i.e. if the narrowest dimension is 350mm divided by 3.5 = 100mm pitch between ball centers. This ensures 3 ball units are always beneath the narrowest dimension of the load at any one time.

## Ordering Procedure

We can help you select not only the most suitable ball unit for your application, we can advise you on every aspect of layout, design, manufacture and maintenance of your installation. We recommend you take advantage of this service.

## To Order

1) It is generally only necessary to precede the Product Reference Number (i.e. 1009, 1019 or 530-0) and the Material Type (i.e. Type 13, 14, 15 or 16), with a "BT" for Ball Transfer.

2) There are instances however, where more information is required.

a) Where applicable the length of thread (dimension N) and the spring washer diameter (dimension W), see pages 6-7 & 10-11, also need to be indicated, e.g. 3001-13-25 and 3004-13-16.9.

b) Also, if applicable, quote the special specification code. For example,

- NO (no oil)
- NS (no seal)
- NB (nylon ball)
- PB (phenolic load ball)
- DE (dirt exit hole)
- SI (solid steel inner ring).

### Key to Dimensions

<b>A</b> Maximum Diameter	<b>L</b> Overall Height
<b>B</b> Working Height of Ball	<b>M</b> Under Flange to Top of Outer Ring
<b>C</b> Ball Exposure above Outer Ring	<b>N</b> Length of Thread or Pin
<b>C<sub>1</sub></b> IS Unit Shoulder Height	<b>O</b> Seating or Fixing Hole Diameter

### Key to Maximum Loading

<b>Type 13</b>	Carbon steel bearings, Zinc plated housings
<b>Type 14</b>	Nylon load bearings, Zinc plated housings
<b>Type 15</b>	Stainless steel bearings and housings
<b>Type 16</b>	Stainless steel bearings, Zinc plated housings

# Flange Fixing Units

## 3016 – 4001

### Features:

General purpose.  
Low profile, dirt exit hole.  
No seals in 3016 and 3025 units.

Ball unit REF. No's 1022 and 1035 with solid steel inner ring (SI) option illustrated with no seal for improved protection from shock loading.

# Tube Fixing, Clamp Fixing Units

## 3004 . 1002 TUBE FIXING

### Features:

Tube fixing is achieved by pushing the spring washer into a suitable size tube and turning to lock. 3 sizes available - see dimension "W". Suitable for use as a castor.

## 2004 TUBE FIXING

### Features:

Tube fixing is achieved by pushing the rubber bush into the tube. Rotating the unit expands the rubber bush for an interference fit. Excellent as a castor.

# Glide Units & Fixing Sockets

This is a simple and inexpensive range of ball transfer units which have a large ball exposure. They are ideal for lighter duties and where there is a cost consideration.

All units are fitted with a seal which simply and effectively removes debris by an internal plastic scraper.

The direction of rotation slightly moves the ball against the seal providing a highly effective cleaning action.

For normal applications steel bearings with zinc-plated housings and components are recommended. However, when used as a castor or in wet conditions stainless steel (Type 15) is recommended.

## 1700 PLUG FIXING

### Features:

Plain body, dirt exit hole standard.

## 1701 BOLT FIXING

### Features:

Drill hole nut and bolt fixing. Maximum tightening torque is 15Nm.

## 1702 FLANGE FIXING

### Features:

Low profile flange fixing, dirt exit hole standard.

## 1703 PLATE FIXING

### Features:

High profile base plate fixing. Drill hole fixing. Dirt exit hole standard.

## 1704 PINTLE PIN and CIRCLIP

### Features:

Pintle pin and circlip fixing.

## 1709 GRIP NECK FIXING

### Features:

Plastic or steel socket fixing.

General tolerances unless stated ± 0.3mm

# Euro Units

SKF Euro Units have a main bearing cup of special toughened steel with a dirt exit hole and a felt or plastic seal.

Min. -22° F to max. +128° F continuous, or +212° F intermittent. Special seals may need to be fitted to suit extreme conditions. In clean conditions and without seals +302° F to +362° F are possible, using Type 15 units at reduced loads.

## Material Spec:

---

Stainless Steel Housings	AISI 304
Stainless Steel Balls	AISI 420
Nylon Balls	NYLON 66

---

## EURO 0

### Features:

Various fixing clips available, dimensionally compatible with the 800 series, see pages 32 & 33.

Felt seals are standard.

## EURO 1

### Features:

Pop rivet or screw fixing.

Felt seals are standard.

## EURO 4

### Features:

Various fixing clips available, coned outer ring. Dimensionally compatible with the 800 series, see pages 32 & 33.

Felt seals are standard.

## EURO 6

### Features:

Various fixing clips available. Reinforced coned outer ring and support cup for improved protection against shock loading. Dimensionally compatible with the 800 series.

General tolerances unless stated ± 0.3mm

# Hi-Tech Units

## Double Seal

This is the first ball transfer design that incorporates double sealing for excluding debris from the bearings.

The top cover seal removes larger particles and the inner knife edge scraper seal skims liquid, paste, fine dust, etc. off the large ball and expels it through side vents.

A dirt exit hole can also be incorporated.

## Rust Resistant Units (Type 15 only)

All parts are of non-rusting material, impervious to the most severe industrial environment and have high impact resistance.

The main bearing track is hardened and has been load and life tested. The ball unit runs equally well inverted or at an angle.

## Materials

Steel (Type 13) or stainless (Type 15) load components and bearings.

Hi-Tech Units have the same rated load capacities as the Ø25.4 mm Hevi-Load units (see pages 20 & 21). The Hi-tech units have glass re-inforced nylon bodies so their weight is less than half that of the Ø25.4 mm Hevi-Load units.

Stainless steel bearings with steel load components (Type 16) are available on request.

## Chemical Resistance

High resistance to organic solvents, petrol and oil. Seek our advice if in doubt.

## Temperature

-22° F up to +212° F

## 6025-0

### Features:

High load capacity. Dimensionally compatible with Hevi-Load 7121.

Ref No.	Bearing Components	Ball Size (mm)	Weight (g)	Dimensions (mm)*													Load Capacity (lb)**

# Hevi-Load Units Type 0 & 1

SKF Hevi-Load Units are designed and manufactured to precise standards.

They offer the highest performance available in load transfer applications with load ball sizes from 12.7mm to 50.8mm diameters and a load capacity range from 77lbs to 4400lbs used either ball up or ball down.

Hevi-Load Units run on the recirculating ball principal. The load ball rotates on a bed of small balls supported on a hardened steel, precision machined table.

They can work at maximum capacity in temperatures from -22° F to +212° F.

Drain hole or grease points can be incorporated on request.

No spanner flats for 7110 and 7106 Hevi-Load Units.

Type 15 Units (all stainless steel) available on request. When using stainless balls, reduce Type 13 load capacity by 33.3%.

All units are machined using CNC machines from one piece of steel, therefore flanges and threads are integral.

## HEVI-LOAD TYPE 0

### Features:

High load capacity, robust body. The Hevi-Load 7121 is dimensionally compatible with the Hi-Tech 6025-0.

## HEVI-LOAD TYPE 1

### Features:

High load capacity, bolt fixing. Two spanner flats for fixing and removing. Drill hole fixing. Maximum tightening torques range from 15Nm for M8 to 25Nm for M24.

# Tuff Series Heavy Duty Units

SKF TUFF SERIES Heavy Duty units are built to provide a long working life and to withstand harsh conditions.

They have a solid machined body with chrome steel bearings and incorporate both dust seal and dirt exit hole (except No. 0519).

They provide a higher load capacity than standard units.

Solid steel housing for attachment purposes, but not shock loading.

All units are machined using CNC machines from one piece of steel, therefore flanges and threads are integral.

## Also Available

All patterns (i.e.: 21,22,23 and 24) of ref numbers 0519, 3019 and 1019 are available with a nylon main ball (Type 14) ideal for light load and reduced marking applications.

## TUFF HEAVY DUTY 21

### Features:

Plain solid machined body.

## TUFF HEAVY DUTY 22

### Features:

Flange fixing either by using rivets or screws.

## TUFF HEAVY DUTY 23

### Features:

Bolt, drilled hole fixing. Maximum tightening torques range from 10Nm for M6 to 20Nm for M12.

## TUFF HEAVY DUTY 24

### Features:

Bottom flange fixing either by using rivets or screws. Drilled hole fixing.

# Heavy Duty Units, Series 800

SKF Series 800 are solid body steel ball units.

They incorporate a seal and dirt exit hole for maximum efficiency and smooth running.

Our CNC production plant can produce special designs to individual customers requirements.

Easy fixing clips are available, ref no. CL14, for quick and effective fixing, see pages 32 and 33. When used the working height of the ball unit dimension 'B' is increased by 0.3mm.

## 800 Series Type 15, Stainless Steel

In general ball unit sizes from Ø15.8mm to Ø44.5mm will have unhardened components typically 304 stainless steel.

Ball units with Ø57.1mm, Ø76.2mm and Ø88.9mm balls have hardened bodies.

## 805 Heavy Duty Ball Units

Similar to 800 series units, the 805 ball units incorporate a stainless steel multi-hole drain plug for improved cleaning and debris removal, stainless bearings for corrosion resistance, and no seal for smoother running.

The 800, 805 and 810 range of ball units are dimensionally compatible with our Euro Unit range of ball transfer units, see pages 14 and 15.

## HEAVY DUTY 800

### Features:

High load capacity, low profile, robust construction.

## HEAVY DUTY 805

### Features:

High load capacity, low profile, robust construction. Multi-hole drain plug provides an extra 600% debris hole area to assist in cleaning.

## HEAVY DUTY 810

### Features:

High load capacity, low profile, coned outer ring.

## HEAVY DUTY 820

### Features:

High load capacity, solid body and robust outer ring for greater durability. Can be dismantled for cleaning.

# Spring Loaded Units

SKF spring loaded units are used in applications such as:

shearing machines; presses; molding machines; tool bases; press brakes; shock loading applications.

Spring loaded ball units reduce damage caused by shock loads. They also allow for dimension changes due to temperature and self-adjust to evenly distribute loads.

## 1507, 1508 and 1509 Units

These units incorporate a plastic scraper seal, which keeps debris outside the ball unit.

Spring loaded ball unit sizes  $\varnothing 31.7\text{mm}$ ,  $\varnothing 39.7\text{mm}$  and  $\varnothing 50.8\text{mm}$  have dirt exit holes as standard. All other spring loaded ball units have felt or foam seals as standard.

Spring loaded ball units can be used as die-lifters, inverted or at an angle.

See pages 22 and 23 for details of our Hevi-Load spring loaded ball units and Die-Lifter ball units.

Completely stainless steel (Type15) spring loaded ball units also available upon request with reduced support loads and depress loads.

Spring loaded ball units with ball sizes of  $\varnothing 25.4\text{mm}$  also available upon request with nylon load ball and stainless bearings (Type 14).

The Type 14 ball units are suitable for light load applications and when object surface protection is required.

The 1507 and 1509 ball units have 2mm thick pressed steel flanges.

## LARGE TOP FLANGE

### Features:

Large top flange fixing. Low profile.

## LARGE BOTTOM FLANGE

### Features:

Large bottom flange fixing. High profile.

## PLAIN BODY

### Features:

Plain body. Low profile.

## SMALL TOP FLANGE

### Features:

Small flange. Low profile.

 General tolerances unless stated  $\pm 0.3\text{mm}$

# Miscellaneous Units

## 1004

### Features:

Supplied with circlip for loosely fixing to materials up to 6.4mm thick. Dirt exit hole.

## 1007

### Features:

Small taper on body allows for interference fixing. Do not strike the ball, use a tube on the flange diameter when fixing. Approx size of taper is 35.8mm top and 35.4 bottom. Dirt exit hole.

## 1500

### Features:

High load capacity. Improved rubber knife edge seal wipes debris off outside the ball. Dirt exit hole.

# Fixing Clips

SKF provides a complete range of fixing clips designed specially for use with their ball transfer units.

They lock the unit securely in position without the need for special tools or machinery.

Some standard clips are described here.

Special designs can also be provided, please ask for details.

The effectiveness and security of ball units attached by means of fixing clips can be influenced by size of fixing holes, table thickness and ball unit tolerances.

Fixing clip dimensions available on request.

## CL11

Available in three sizes only to suit ball units with body diameters of 36mm, 45mm and 62mm.

## Fitting CL12 and CL14 Fixing Clips

When fitting ball units with CL12 or CL14 fixing clips, do not strike the load ball to press the unit into position.

Instead, apply an even force onto the ball unit's body using a tube or similar tool.

## CL12 (made to order)

This clip will fit under the flange of any of our ball units that have parallel sides. If any particular size of clip is not in stock there may be a minimum order charge. Fixing hole sizes on application.

On certain units it is possible to machine a recess to retain the clip in the body of the ball unit. These units must have a solid steel body, are not stock items and are only manufactured to specific orders.

## CL13

These are to be used with ball units with a body diameter of 24mm only.

## CL14

Stocked for body diameter of 24mm, 36mm, 45mm and 62mm. This clip was designed for fixing ball units from the top face of a ball platform. The clip can also be used for fixing the ball unit from underneath the ball platform if clip CL11 is not suitable. Table top material thicknesses available on request.

CL14 fixing clips must be placed into the seating hole first, before the ball unit is fitted.

## CL15 (made to order)

A circlip type clip used mainly for solid machined body units. The circlip is fitted from underneath the ball unit and is available in many sizes.

Ball units with circlip grooves are not stock items. The standard circlip is self color spring steel, but plated circlips can be offered where corrosion resistance is required.

# Tee Blocks, Die Tables

## Tee Blocks

### Single Minute Tool and Die Changing

Our comprehensive range of tee blocks and spring loaded ball transfer units, set into the bed of your power press or machine tool, will allow effortless positioning of tooling but still allow rigid clamping.

We supply tee blocks for both standard and non-standard tee slots the length, pitch, ball height etc. being dependant on tool weight and profile.

Other sizes available on request.

Tee blocks can be designed and manufactured to suit particular applications. See page 23 for our range of Die Lifter ball units.

DIN 650			
a	b	c	h
22	37	16	38
24	42	18	42
28	46	20	48
36	56	25	61

## Quick Change Die Tables

For all types of molding and stamping applications.

They allow quick, easy tool changing with storage close to the machine. All tables are fully guarded. Access to the machine via a lift-up gate if required.

Custom designed to your specific requirements, installation is carried out by our engineers.

**NOTE** - safety rails should be fitted where there is the possibility of loads rolling off.

# Ball Stands, Hanger Bolts

## Ball Transfer Stands

Allow the movement of heavy materials and large fabrications. Typical applications include the handling of plate or sheet-steel for shearing or press brake machines.

Two types of stand are available, both made from heavy duty mild steel tube.

Overall height can vary to suit the application and can be adjusted to  $\pm 38\text{mm}$ .

Stands need to be positioned at not less than 60cm centers to enable an operator to pass between them and to safely move close to machinery.

**NOTE** - posts should be fitted where there is the possibility of loads rolling off. Minimum load dimension should not be less than the pitch of 4 stands.

Detach posts are available as an option.

**1 1/4" (32mm) size:**  
 2 3/8" (60mm) outside diameter x 2" (50mm) inside diameter. Thread 1 1/2" B.S.P. Available in any height, 680mm is typical. Adjustment  $\pm 38\text{mm}$ , capacity 250Kg.

**2" (50mm) size:**  
 3" (76mm) outside diameter x 2 1/2" (63mm) inside diameter. Thread 2 1/2" B.S.P. Available in any height, 680mm is typical. Adjustment  $\pm 38\text{mm}$ , capacity 340Kg.

## Hanger Bolts

Ideal for the easy movement of large wall panels or sliding doors.

Ball units (ref N° 515-0, (see page 13) are secured into a circular plate with a central bolt, ideal for overhead suspension using most types of existing track. Multi-directional, they will negotiate tight curves and even right-angles with ease.

Hanger bolts can be supplied complete or self-assembly and can be produced to suit any specific application.

**Standard hangerbolt:** M16 x 85mm threaded length with two spanner flats for easy attachment and vertical adjustment.

**Finish:** Zinc plated or stainless steel

**Standard ball units:** Six 515-0-13 at 50Kg load capacity with retainer clip.
