

Seal the future of your business!

With SKF Commercial Wheel Seals

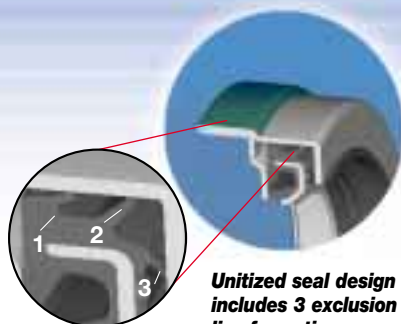

Even the world's best bearings don't achieve their full potential without adequate protection from contaminants. So SKF offers a comprehensive line of commercial vehicle wheel seals – both grease and oil – designed to provide maximum sealing performance and longer life under virtually all driving and road conditions. SKF offers unprecedented seal coverage for the commercial vehicle marketplace worldwide.

As a key OE-supplier of seals to CV fleet manufacturers worldwide, SKF is constantly working to improve its product designs and elastomeric materials to assure compatibility with new synthetic fluids and additives that can cause premature, and sometimes dangerous, seal failure.

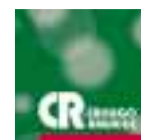

The most advanced seals in our assortment have a variety of unique features, including:

- Advanced HNBR (Hydrogenated Nitrile Butadiene Rubber) material compatible with all popular synthetic fluid lubricants and provides strong resistance to abrasives.
- Unitized designs keep road contaminants out and bearing lubricants in for maximum bearing protection.
- Multi-lip designs, usually 3- or 4-lip, provide superior exclusion of dirt, water, and other contaminants; all lips face air side for optimum sealing – even as lips begin to wear.
- Globally acclaimed green Bore-Tite® material used in most designs assures a positive fit to the hub, providing a perfect seal against water splash.
- Patented “Waveseal” design continually sweeps oil back to bearings.

TFO

SRT-1 Seal Removal Tool

Removing wheel seals with the wrong tool (such as a pry bar) can cause damage to the hub bore and make it impossible for a newly installed seal to protect the bearing. The SRT-1 Seal Removal Tool enables your maintenance personnel to quickly and safely remove seals. U.S. Patent No. 5,617,621

SKF is a leading manufacturer of high-tech wheel seals. While that's important to the technician who installs the seals for his customer, it's only part of the story.

No other seal supplier offers the type of follow-up support and service that you get from SKF. Over the years the company has earned a reputation for providing valuable training tools, including technically oriented literature and an assortment of related in-depth product information, unlike any other manufacturer of wheel-end products.

For more information about the full array of products and programs available from SKF, including TFO, please contact your local SKF distributor.
