Note) The permissible load  $F_p$ \* indicates the maximum axial load that the Ball Screw can receive.

This model is capable of achieving a longer service life than the conventional Ball Screw under a high load.

For the axial clearance, this model has clearance G2 as the standard. Other clearance is also available at your request. Contact THK for details.

### Model number coding

**HBN3210-5 RR G2 +1200L C7**

Model number

Seal symbol (\*1)

Accuracy symbol (\*3)

Overall screw shaft length (in mm)

Symbol for clearance in the axial direction (\*2)

(\*1) See A-816. (\*2) See A-685. (\*3) See A-678.

Note) The rigidity values in the table represent the spring constants obtained from the load and the elastic deformation when providing an axial load, 30% of the basic dynamic load rating (Ca).

These values do not include the rigidity of the components related to mounting the ball screw nut. Therefore, it is normally appropriate to regard roughly 80% of the value in the table as the actual value.

If the axial load ( $F_a$ ) is not 0.3 Ca, the rigidity value ( $K_N$ ) is obtained from the following equation.

$$K_N = K \left( \frac{F_a}{0.3Ca} \right)^{\frac{1}{3}}$$

K: Rigidity value in the dimensional table.
