

Design change of SCHNEEBERGER Ball MONORAIL products

We will change the design of the Ball-MONORAIL carriages.

We will not change the Ball-MONORAIL rails.

The product stays compatible as a whole profiled guideway system and the components (rails, carriages) are fully interchangeable between the old and the new design.

The carriage will be improved with a new design to receive a better performance.

The topics are:

- There is no relevant difference of hole patterns, functional system dimensions and locations of lube ports.
- The only difference is the total steel body length of the carriage and the tolerance of the carriage width.
- **The end-plates cannot be handled as a spare parts any more.**

The following CAD Data shows the sizes BM 15 and BM 35 with new dimensions.

The sizes BM 20, BM 25, BM 30 und BM 45 are still not changed.

The design change follows a time schedule, please feel free to contact us.
