

SEALMASTER

**BEV
DRY**

The Sealmaster Beverage Bearing Has Proven Itself
on the WET Side of Filling Applications...

...SEALMASTER PROVES ITSELF AGAIN
ON THE DRY SIDE!!!

Sealmaster Bev Dry provides excellent performance in applications on the dry side of beverage filling facilities... typically warehouses, shipping areas, packaging lines, palletizers, etc.

AND Sealmaster Bev Dry requires **NO** re-lubrication. In fact, Bev Dry bearings are designed to run longer without re-lubrication. You have more important things to focus on to keep your lines running well. Since 1994, the Sealmaster Beverage Bearing has significantly increased the *UPTIME* at several Beverage facilities nationwide and has proven that mounted bearings in the wet, corrosive, bottleneck areas of beverage facilities can be *worry-free*. The Bev Dry is a welcome addition to a complete Sealmaster Beverage Industry Product Offering. Products you can standardize on and rely upon to provide years of maintenance free operation. Now, Bev Dry proves that mounted bearings in the dry, continuous service areas of beverage facilities can also be *worry-free*.

BEV DRY FEATURES AND BENEFITS

Feature	Benefit
Non-Relubricable Design	The Bev Dry products are designed to run longer without re-lubrication.
Safeguard Spring Seals Spring Loaded (Oil Seals) Contact Lip	The same seals that have proven themselves in the Sealmaster Beverage Bearing. They are excellent in the areas of contaminant exclusion and lubrication retention.
Extra Wide Outer Race	Additional grease capacity.
Metal Land Riding Retainer	Increased and better lubrication flow in the bearing due to additional grease capacity because the retainer is smaller than molded plastic.
Premium Synthetic Grease	Offers superb long term lubrication properties. Has twice the stability as standard grease.
Superior Shaft Locking	The Gold Line post heat-treat drilled and tapped, zone hardened inner ring coupled with precision ground diamond faceted set screws positioned at 120°. Required for long term performance reliability.
Pin & Dimple Anti-Rotation	Eliminates outer race creep and fretting.
Premium Paint	The best paint available in the industry. Aesthetically enhanced with exceptional corrosion resistance.
Black Oxide Race Coating	Increases lubricity while protecting the bearing steel from corrosion.
